

Pas Reform Piping for SmartSetPro™ setter

For the delivery of clean, uninterrupted fresh air
to SmartSetPro™ setters

Pas Reform
Hatchery Technologies

Piping for SmartSetPro™ setter

Benefits

Fresh, conditioned air from the corridor or air supply plenum is transported to the setter units through the air piping set. With minimum air resistance and special adaptors, this set completes the Polystyrene front panels for Pas Reform's SmartSetPro™ setter. Connected to each modular incubator section, the air piping ensures optimal air conditions for each section of 4 setter trolleys
