2.7%

$2.7\% \times 0.2 \times 52 \text{ million} = 280,800 \text{ extra day old chicks per year}$

A hatchery loses 0.2 percent of saleable chicks for every 1 percent of fertile eggs placed small end up in the setter tray (*Bauer et al, 1990*)
Further reading: 'The effects of setting eggs small end up' (*Pas Reform Academy, article 14*)

Hatchery capacity
1 million chicks per week
